

**NAME**

**o2whereis** – locate files used or generated by o2c

**SYNOPSIS**

**o2whereis [-r] file**

**DESCRIPTION**

**o2whereis** searches the paths given in *~.o2c.red* for the file *file*. How the search is done is described in *o2c(1)*. The full path of the first file found is printed to *stdout*.

**o2whereis** is used by the Oberon-2 Emacs mode to locate source and symbol files.

**OPTIONS**

**-r** If just a RCS file is found, print the full path of the RCS file. The default is to print the name of the associated working file.

**--redir <file>**

Use *<file>* as redirection table (instead of the default *~.o2c.red*).

**FILES**

*~.o2c.red* path list
